Hi All,

It took longer than expected to finalize the selection of PC parts for the organ and I would like to seek your thoughts before proceeding with the purchases.

The ideal solution for the PC would have two touch screen monitors attached to the left and right side of the organ console that do not block the closing of the organ cover and require no screws and/or drilling to the organ console. The PC itself preferred to be a fixture of the organ console with minimum visual exposure so cable can be attached without plug and unplug.

Option #1 shopping list:

1. 2 x [Wimaxit 14 portable touch monitor](#) (\$249.99 x 2 = \$499.98) [321x191x9 mm]
2. 1 x [Lenovo M75q Tiny PC](#) (\$849.99) [179x37x183 mm]
3. Misc. / Cables (USB-C, etc.) (~\$80.00)
4. 1 x [Velcro Removal Tape](#) (\$14.47)

This option contains the monitors that fit perfectly to the left and right console wall without blocking the cover and the Tiny PC is powerful yet small enough to attach at the bottom right of the organ console with minimum exposure to congregation based on the measuring against the specifications

The caveats of this option is the use of an unfamiliar brand of the touch monitors because it is the only brand with the ideal monitor size that fits. Based on the Amazon review score, the product is ok without much problem but still something to consider.

(continue on another email).

-Scott Y.
